 Flood Zone Confidence Maps

- Legend
- River
- Urban Area
- Flood Zone Confidence Levels
 - High
 - Medium
 - Low

High Confidence refers to areas where the flood zone is derived from detailed river modelling studies.
 Medium Confidence refers to areas where the flood zone is derived from the Environment Agency's national broadscale modelling study.
 Low Confidence refers to areas where no modelled data exists for the return period and therefore a flood zone from a higher return period (i.e. Flood Zone 2) has been used as a proxy.
